[킬러] 1 다음 글의 밑줄 친 부분 중, 어법상 **틀린** 것은?

The paradox of contemporary scholarship is that the very abundance of information ①has rendered synthesis nearly impossible. A researcher confronted with millions of documents finds herself in a position ②where the traditional method of reading everything relevant is no longer viable. What emerges instead is a mode of inquiry ③in which algorithmic tools filter, rank, and cluster texts, thereby determining, long before any human judgment intervenes, ④that counts as worthy of attention. That such filtering encodes the biases of its designers is a possibility ⑤too rarely acknowledged by those who celebrate the objectivity of computation.

[킬러] 2 (A), (B), (C)의 각 네모 안에서 문맥에 맞는 낱말로 가장 적절한 것은?

Economists once assumed that markets punish irrationality, so that foolish traders would eventually be driven out. Yet careful modeling reveals the opposite may hold. Because irrational investors are willing to bear risks that prudent ones avoid, they sometimes reap returns that (A)[**exceed / trail**] those of their cautious counterparts. Over the long run, such outsized gains allow their share of the market to (B)[**dwindle / expand**] rather than vanish. The implication is disquieting: rather than being (C)[**eliminated / vindicated**] by competition, systematic error can propagate itself, embedding fragility ever deeper into the financial system.

① exceed - dwindle - eliminated
② exceed - expand - eliminated
③ trail - expand - vindicated
④ exceed - expand - vindicated
⑤ trail - dwindle - eliminated

[킬러] 3 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?

The historian's craft depends on a peculiar reversal of ordinary temporal reasoning. In everyday life we infer effects from causes; the past is presumed to shape the future. But the archive presents us only with residues, and the historian must work backward, treating each surviving trace as evidence for a vanished state of affairs that produced it. The danger is that survival itself is not random. Documents endure because someone valued, catalogued, or merely neglected to destroy them, and this selective persistence quietly shapes what appears knowable. To mistake the visible remnant for the whole is therefore to let _____.

① the archive's silences masquerade as historical absences
② the chronology of causes override the logic of effects
③ moral judgment displace the demand for factual precision
④ the historian's imagination substitute for documentary rigor
⑤ competing narratives collapse into a single authoritative account

[킬러] 4 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은?

The concept of "emergence" is often invoked to explain how wholes acquire properties their parts lack. Water is wet, though no single molecule is; consciousness arises from neurons that, individually, know nothing.

(A) Yet this dismissal moves too fast. To say a property is derivable in principle is not to say the derivation is available in practice, nor that the higher-level description is dispensable. A weather system may be composed of particles, but no account of particles alone will yield the concept of a hurricane.

(B) Critics of the notion, however, charge that it merely names our ignorance. Given complete knowledge of the parts and their interactions, they argue, every so-called emergent property would in principle be deducible, and the mystery would evaporate.

(C) The upshot is a subtler position. Emergence marks not a gap in nature but a hierarchy of explanations, each indispensable at its own scale. What looks like metaphysical novelty may be, more modestly, the irreducibility of one vocabulary to another.

① (A)-(C)-(B)
② (B)-(A)-(C)
③ (B)-(C)-(A)
④ (C)-(A)-(B)
⑤ (C)-(B)-(A)

[킬러] 5 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은?

This apparent generosity, however, conceals a subtle constraint on what the recipient can afford to think.

A gift, anthropologists observe, is never wholly free. (①) When one person bestows something upon another, an obligation is quietly created, a debt that hovers until reciprocated. (②) Consider the seemingly benign practice of a corporation funding independent research. (③) The funds are offered without explicit demands, and the scientists retain formal autonomy over their conclusions. (④) Precisely because no condition is stated, the researcher internalizes an anticipatory caution, avoiding questions whose answers might displease the benefactor. (⑤) The most effective forms of influence, in short, are those that never announce themselves as influence at all.

[킬러] 6 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 **않은** 것은?

Translators have long debated whether fidelity means reproducing a text's words or its effects. A literal rendering may preserve every lexical item yet ①betray the original's music, its rhythm and connotation. Conversely, a translation that recreates the emotional impact of the source often must ②depart from its surface structure, substituting one idiom for another. The finest translators recognize that these two loyalties are frequently ③incompatible, and that choosing one entails sacrificing the other. What appears to be carelessness in a great translation may in fact be a ④reckless decision to honor the spirit at the expense of the letter. To judge such work by mechanical accuracy alone is to ⑤misconstrue the very nature of the enterprise.

[킬러] 7 다음 글의 밑줄 친 부분 중, 어법상 **틀린** 것은?

Rarely ①does a scientific revolution announce itself in a single stroke. More often, anomalies accumulate until the prevailing framework, ②strained beyond repair, gives way. Kuhn argued that what practitioners perceive is itself shaped by the theory they hold, so that two scientists looking at the same instrument may not, in a meaningful sense, ③see the same thing. This is why the transition between paradigms resembles less a logical proof ④than a conversion. Those ⑤whom resist tend not to be persuaded but simply to be replaced, as a new generation, untrained in the old assumptions, comes to maturity.

[킬러] 8 다음 글의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

The romantic image of the lone genius, laboring in isolation until inspiration strikes, has proven remarkably durable, and remarkably misleading. Historical study of major discoveries reveals that breakthroughs typically cluster: the same idea arrives, independently, to several minds at nearly the same moment. Calculus, natural selection, the telephone—each was contested by simultaneous claimants. This pattern suggests that discovery is less the product of individual brilliance (A)_____ the ripening of a shared intellectual context. When the necessary concepts, instruments, and questions are all in place, the decisive step becomes, in a sense, overdetermined; it will be taken by someone. (B)_____, the celebrated innovator is often merely the fastest runner in a crowded race, and the myth of solitary genius obscures the collective conditions that made the race runnable at all.

① (A) than ... (B) Nevertheless
② (A) as ... (B) In contrast
③ (A) than ... (B) On this view
④ (A) so ... (B) By comparison
⑤ (A) than ... (B) Conversely
